

BITCOIN DOWN 75% FROM ITS HIGH - WHAT TO DO NOW?

Date : November 20, 2018

We don't get them all right, but we've been consistently negative on the prospects for Bitcoin, ever since we started writing about it in August of 2017. Bitcoin was trading then almost exactly where it is at the moment, about \$4,600. Among our articles was one written at \$16,964 on 12/19.17, one day after the all time high of \$18,674. We have provided, for your easy review, our writings that have included reference to Bitcoin, the most recent listed first. A summation of our opinion today, is exactly as we expressed it with our first mention back in August of 2017. "When the books are written about the financial follies of the early 21st century, the rise of bitcoin will be one of the ringing bells signaling the end". **There was 100% risk in owning Bitcoin at \$18,674 and there remains 100% risk at \$4,500.**
